## How can we become BETTER INFORMED?

IDEAS for better data *about* young people

IDEAS for better understanding *among* young people

Guides for discussion among young people about health; transparent communication taught in schools and families; health system navigation taught in schools

More engagement & linkage with data sources which already capture/differentiate by age - e.g. ABC Talks

FUNDING for more data collection!!!

Enabling young people to connect with others who are, or have been, in similar circumstances, so that people can benefit from sharing lived experience and learn from each other.

All young people informing what data and research happens re youth health and wellbeing

Involve young people in what "questions" are being asked - it is important to them

Community co-design of research - young people being involved in determining research priorities and designing studies (this has been successfully done before, with a different population, in healthcare research)

Census capture of LGBTQIA+ populations

Utilising communication professionals and designers to tailor information delivery to young people

better funding for true co-design & improved research translation so the research get to the people who needs to hear it!

we need multi-sectoral approaches e.g. health and education working together

Better liaison between DHHS & DET to get permission to work with schools to get data from go

We need govt / donors to invest in this generation! Better data (for example) needs \$\$.

Using forums that youth are familiar with. Collecting data over short surveys on Instagram stories or Facebook. Making health relevant to youth.

researchers to work together to share their data. data need to be linked. less replication and better access.

Incorporating the basics of healthcare system navigation into the high school health curriculum. Making free/low-cost short courses available via VET/TAFE providers.

Link why collecting data can help Politicians/Gov "get what they want"

## How can we better INCLUDE young peoples' perspectives?

### IDEAS for empowering young people to participate

### IDEAS for governance that enables young people to be represented

### IDEAS for getting the lived experience of young people better heard

3

## How can we improve SERVICES for young people?

### IDEAS for more relevant services co-designed by young people

Engage funders in the type of services that young people are wanting to see.

Better service transitions beyond 18

More support for carers, family members of young people

Build safe non-clinical spaces to build trust so that young people can be supported once they have key needs met and feel safe.

Building cultural capacity into EVERY service as a tender requirement

Ensuring young people are involved in non-youth specific community health projects.

Include psychiatry as an option in ndis funding plans

National health system navigation tool for youth 16+ that covers key issues for youth across the whole system - private & public so they can get the right information at the right time when they need it.

### IDEAS for services being more affordable for young people

Access to public transport for rural youth to be able to access health services that can't be delivered through telehealth.

High end, complex, mental health insurance

Remove 22 year old age minimum for Centre link independence

Remove junior wages for 18-21 year olds

earlier access to health care concession cards for young people and/or students

Expanding coverage of bulk billed mental health services through practitioner incentives, and publication of gap payment data

Better investment in the MHC system to include temporary visa holders

Employ peer workers, social workers

Someone in the Disability and Health chat mentioned there is a Youth Fund for something of the kind one of which youth services are funded when one is a carer. This could be funded by state, charities, philanthropists, go fund me etc.

Nurse navigator or Healthcare liaison to help young people navigate the health system with more ease. Particularly for those with Chronic illness or a disability who require multiple appointments each day/month.

remove out of hours surcharge

Cross-organisation collaboration - lots of places have media connections, training about sharing lived experience etc.

### IDEAS for better understanding of young people by health practitioners

If a service has been designed for (and ideally by) young people, invite other young people not involved with the process to road test it.

Following up with young people who may have disengaged through diverse avenues. Not putting the onus on the healthcare consumer to do all the legwork.

Building comprehension of diverse ways people communicate. Awareness & acceptance of the fact that everyone develops at their own pace, in their own way.

Mental health workforce - attract people from more diverse backgrounds

Designated representation on relevant Boards/consumer orgs/associations for young people - both young clinicians and young consumers

MAKE NDIS ACCESSIBLE FOR YOUTH

improve on ndis accessibility and make qualified medical professionals (QITs) assess applications instead of people not in health

Lived experience youth stories in university education for practitioners

More roundtable discussions where young people can share their lived experiences with medical professionals. Especially target discussions where the central point of contact for many young people

reverse mentorship, and prioritise that, or similar programs in workforce

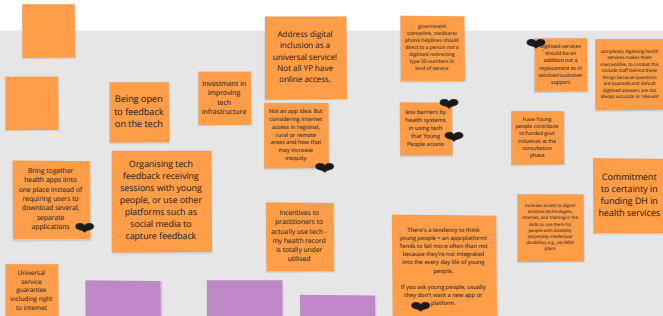

Creating a training program delivered by young people in hospitals/medical centres to healthcare practitioners

asking the right questions about gender and sexuality

education RE how to use telehealth as a practitioner

lower medicare threshold for young people

design services with young people. ask them what they want, and how they want it delivered.

IDEAS for better platforms / apps accessible by young people

How can we improve health TECH that young people use?

Continuous feedback via paid beta testers, focus groups, etc. from diverse backgrounds
